

ASET / GLOBAL EQUITY RESEARCH

Professional worldwide equity screening and deep-research framework

STATUS

ORIGINAL TEMPLATE — no market figures, rankings, or investment conclusions are fabricated in this document. Populate only from the official source registry and trace every material claim.

1 / RESEARCH MANDATE

Define universe, jurisdictions, exchanges, sector, market-cap and liquidity boundaries, valuation date, currency, fiscal basis, time horizon, and the decision question. Establish an entity card before analysis.

2 / OFFICIAL-SOURCE POLICY

Use regulator filings, exchange disclosures, issuer annual reports, official interim reports, official earnings materials, and approved ASET provider records. Preserve publisher, URL or file locator, publication date, retrieval time, period, currency, unit, source tier, and claim coverage. Search summaries and unverified aggregators are not evidence for key facts.

3 / SCREENING PROFILE / equity_v1

Dimension	Weight	Evidence focus
Business & moat	20%	Segments, competition, pricing power, durability
Financial quality	25%	Growth, margins, ROIC, cash conversion
Valuation & expectations	20%	P/E, EV/EBITDA, scenarios, implied expectations
Growth & catalysts	15%	Organic growth, runway, observable catalysts
Balance sheet	10%	Net debt, maturities, liquidity, refinancing
Governance & risk	10%	Disclosure, controls, concentration, tail risk

Hard gates come before scores. Missing data is not a zero. Coverage below 60% is insufficient for a total ranking; 60–<80% is provisional.

4 / DEEP RESEARCH CARD

Thesis • refuting evidence • business and moat • financial quality • balance sheet • valuation scenarios • catalysts • risks • monitoring metrics • invalidation conditions • source manifest • unresolved data gaps.

5 / CONFIDENCE

Confidence is evidence reliability, not attractiveness: 35% source quality + 30% data coverage + 20% cross-source consistency + 15% recency fit. Report the score and confidence separately.

6 / DELIVERY CHECKLIST

Validate entity identity, period consistency, currencies, units, reported versus adjusted basis, source mapping, formula integrity, missing fields, conflicts, and sensitivity. Export the companion workbook and preserve the original data artifacts.

IMPORTANT NOTICE
